

Usability Testing Report

EcoSync App Prototype • Prepared by UX Research Team

1. Executive Summary

This report details the findings of a remote usability test conducted on the EcoSync mobile app prototype. The primary goal was to evaluate the intuitiveness of the onboarding flow, the activity logging process, and the discoverability of the analytics dashboard.

Overall, the app performed well in onboarding (100% success rate), but revealed critical navigational friction regarding the analytics dashboard, where 40% of users failed to locate their weekly report.

2. Methodology & Demographics

Testing was conducted remotely with 5 participants using a Think-Aloud protocol. Each session lasted approximately 30 minutes. Participants were tasked with three core scenarios.

- **Demographics:** Ages 22-34, comfortable with mobile apps, interested in environmental sustainability.
- **Format:** Figma Interactive Prototype tested via Zoom screen share.

3. Task Metrics Summary

Task Name	Success Rate	Avg. Time (sec)	Error Count
T1: Account Onboarding	100%	50.4	1
T2: Log an Activity	80%	55.0	3
T3: View Weekly Analytics	60%	86.0	6

4. Key Findings & Observations

Finding 1: High friction in discovering the Analytics Dashboard

Severity: **High**

Users consistently struggled to find the "Weekly Report." Many naturally gravitated towards the "Profile" icon in the top right corner, expecting personal statistics to be housed there. The bottom navigation bar's icon for Analytics (a small bar chart) was frequently overlooked or misunderstood.

Recommendation: Relabel the bottom navigation icon with text ("Reports") or add a summary widget directly on the home dashboard that links out to the full analytics page.

Finding 2: Confusion without a search bar in Activity Logging

Severity: **Medium**

While most users navigated the category tree successfully, Participant 4 struggled significantly because they wanted to type "Biking" rather than clicking through "Transportation > Active." As the app scales with more activities, the category-only approach will bottleneck users.

Recommendation: Introduce a global search bar at the top of the "Log Action" modal to allow power users to quickly find and log specific activities.

Finding 3: Seamless Onboarding Experience

Severity: Low (Positive)

The onboarding flow was highly successful. The progress bar at the top of the screen gave users confidence, and the copy was praised for being clear and value-driven. The only minor hiccup was hesitation around location permissions.

Recommendation: Add a brief microcopy text below the "Allow Location" prompt explaining **why** it is needed (e.g., "Used to automatically track commute distances").

5. Next Steps

Based on the testing, the UX design team should prioritize redesigning the bottom navigation hierarchy and updating the prototype. A follow-up unmoderated A/B test is recommended to validate the new navigation structure before handing off to development.
